Summary

I want to update the directory app so that it shows the self-reported interests of each event attendee. Users will value seeing other attendees' interests because 1) it will help them identify other attendees with whom they share interests and therefore could become friends and 2) it will help them propose activities for hanging out with people they met at the gathering.

User Stories

- As an event attendee, I want to see the activity interests of another attendee so I know what activity to propose doing for a hangout.
- As an event attendee, I want to filter people by their interests so I know who shares interests with me.

Product Requirements

Directory Entries

- There's a downward facing caret icon on each person record in the directory. If the user clicks the caret icon, the directory entry expands, showing the person's self-reported interests.
- On page load, all directory entries are "closed", showing only the person's name, phone number, and the copy phone number button (interests are not visible).
- For each person record, the following list of interests shows. Interests are listed under category headings in the person record (e.g., Outdoors, Games)
  - Outdoors
    - Go on a neighborhood walk
    - Walk to get boba or coffee
    - Go on an easy hike
  - Games
    - Play a board game
    - Do a jigsaw puzzle
    - Play trivia at a bar
  - Everyday
    - Cook a simple dinner
    - Do some gardening or plant potting
    - Do a Costco run
  - Explore
    - Visit a museum
    - Explore a neighborhood in SF

- ○ Creative
    - ■ Do a craft
    - ■ Bake something
- If the person has a particular interest, that interest is shown with a green checkmark ✅ahead of it.
- If a person isn't interested in a particular activity, that activity is shown with a red X ❌ahead of it. The interest text is also medium gray and has strike through formatting.
- Within a category, interests are listed above non-interests

Outdoors
- ✅Go on a neighborhood walk
- ✅Go on an easy hike
- ❌~~Walk to get boba or coffee~~

Games
- ✅Play a board game
- ✅Do a jigsaw puzzle
- ✅Play trivia at a bar

Everyday
- ✅Cook a simple dinner
- ❌~~Do some gardening or plant potting~~
- ❌~~Do a Costco run~~

Explore
- ❌~~Visit a museum~~
- ❌~~Explore a neighborhood in SF~~

Creative
- ❌~~Do a craft~~
- ❌~~Bake something~~

Wire frame of interests lists under a person record

Filter

- There's a filter UI between the top person record and the subtitle "Newish Adults Unite, December 9, 2025"
- The UI is a pill that can be clicked to show a dropdown of interests
    - The pill has name: "Hangout preferences"
    - The pill has a downward facing caret to indicate that when clicked, a list of items will appear
- When the pill is clicked, the following list of items displays:
    - Go on a neighborhood walk
    - Walk to get boba or coffee
    - Go on an easy hike
    - Play a board game
    - Do a jigsaw puzzle

- ○ Play trivia at a bar
- ○ Cook a simple dinner
- ○ Do some gardening or plant potting
- ○ Do a Costco run
- ○ Visit a museum
- ○ Explore a neighborhood in SF
- ○ Do a craft
- ○ Bake something
- If the user clicks outside the dropdown list of items (i.e., they don't select any item), the list closes
- The user can only click on one item
- When the user clicks on an item, the dropdown list closes and the pill shows the selected hangout preference (e.g., Play a board game). Only people records with that interest are displayed.
- When a filter item is selected, clickable text appears to the left of the pill with text "Reset filter"
  - ○ If the user clicks "Reset filter", the filter resets so all people records are showing.

Data Logging

- Whenever a user applies a filter, a data event is logged showing that the user applied a filter.
- The data event includes the name of the interest they applied a filter for
